Modifier row, close up

Tips

- Press **Y** over the 3D Viewport to open ModPerf Lite. Change the key in **Preferences › Add-ons › ModPerf Lite**.
- **Shift+click** several number fields, then drag one to change them all at once.
- Hold **Shift** while dragging a value for fine control. Click a field to type; maths like **2*4** works.
- Drag across the visibility buttons or checkboxes to set several in one go.
- **Ctrl+click** a modifier's arrow to open it and close all the others.
- **Shift D** over a modifier duplicates it. **Ctrl Z** undoes any change.
